# LAB EXPERIMENT - 10

## EXPERIMENT 10: THREAT INTELLIGENCE REPORT FOR SOC

- **Aim**

To prepare a professional threat intelligence report for Security Operations Center (SOC).

- **Inputs**
  - Threat data
  - Security incident information

- **Tools Used**
  - Document editor (MS Word)
  - Presentation tools

- **Dataset Required**
  - Real-world threat intelligence data

- **Brief Theory**

Threat intelligence reports provide actionable insights to SOC teams by analyzing threats, assessing risks, and recommending mitigation strategies. These reports help bridge the gap between technical findings and business decisions.

- **Procedure**
  1. Summarized the threat landscape
  2. Analyzed the impact of the threat
  3. Provided mitigation and recommendations

# THREAT INTELLIGENCE REPORT (SOC FORMAT)

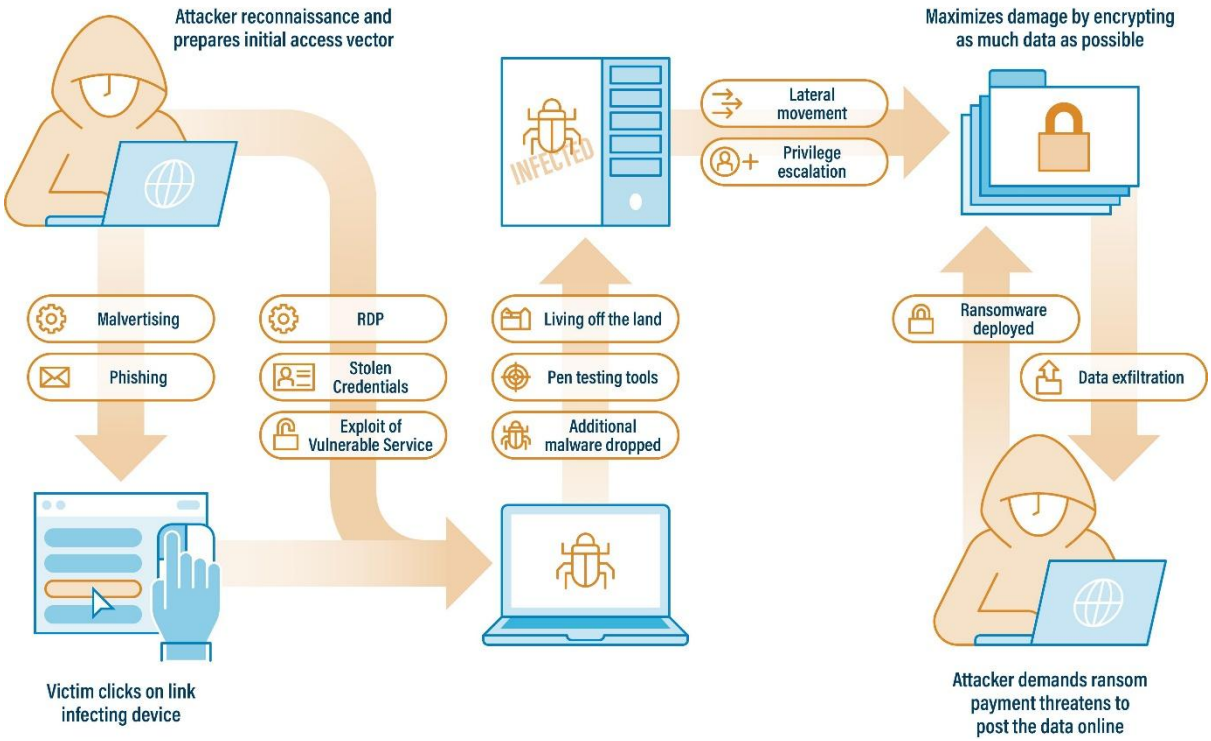
## 1. Executive Summary

A recent cyber threat involving a **ransomware attack** has been analyzed. The attack targeted organizational systems, leading to data encryption and service disruption. Immediate response actions are required to prevent further damage.

## 2. Threat Overview

- **Threat Type:** Ransomware Attack
- **Target:** Organizational systems
- **Attack Vector:** Phishing email with malicious attachment

## 3. Ransomware Attack Lifecycle



## 4. Threat Landscape Summary

Ransomware attacks are increasing globally, targeting both small and large organizations. Attackers use social engineering techniques to trick users into executing malicious files.

**5. Indicators of Compromise (IoCs)**

- Suspicious email attachments
- Unknown executable files
- Unusual file encryption activity
- Communication with unknown IP addresses

**6. Impact Analysis**

- Data encryption and loss of access
- Operational downtime
- Financial loss
- Reputational damage

**7. Risk Assessment**

- **Severity:** High
- **Likelihood:** High
- **Impact Level:** Critical

**8. Mitigation Strategies**

- Avoid opening suspicious email attachments
- Implement endpoint protection
- Use regular data backups
- Enable multi-factor authentication (MFA)
- Keep systems updated with patches

**9. Recommendations for SOC**

- Monitor network traffic continuously
- Deploy intrusion detection systems (IDS)
- Conduct regular security awareness training

- Perform vulnerability assessments

## 10. Result

A structured SOC-level threat intelligence report was successfully prepared, including threat analysis, impact, and mitigation strategies.

## 11. Conclusion

Threat intelligence reports help SOC teams respond effectively to cyber threats by providing actionable insights and improving decision-making.
